

# SAIAN<sup>®</sup>

NATURAL CLINICAL

ACHIEVE A LIFTED NECK, CHEST & DECOLLETE  
IN JUST 3 WEEKS!

SAIAN Neck and Chest Creme  
featuring the newest clinically tested anti-gravity  
ingredients **Majestem™** & **Idealift™**.

With age, the effects of gravity on the skin become more and more visible. The skin is not as firm and it begins to sag. **SAIAN Neck and Chest Lift Crème** is the newest product on the market which produces a visible lifting action on the face, neck, décolleté, and chest in as little as 3 weeks! Our clinical strength anti-aging product features **Majestem™**, an incredible ingredient, which lifts the sagging skin of the neck and décolleté area. It protects against oxidative stress (air pollution, UV radiation) and recreates skin tension by restoring the mitochondrial dynamism, the first active ingredient to provide a visible lifting action.

Tests have shown that in just three weeks the sagging neck skin is significantly tightened (surface -10,6% up to -56%) and the neck folds are evened out. After six weeks, the cheeks are visibly lifted and crow's feet wrinkles are smoothed out (surface -11% up to -75%). **Majestem™** is derived from HTN Edelweiss plant stem cell culture and is completely safe and non-toxic. **Idealift™** fights against cutaneous sagging and decreases the visible effects of gravity on the skin which accentuates flaccid jowls due to aging or daily aggressions. Based on lipopeptide, **Idealift™** acts on the skin's fibroblasts and stimulates the synthesis of a number of proteins involved in the building of the elastic tissue such as tropoelastin, fibrillin-1, fibulin-5, and lysoloxidase. Nitro tests showed an increase of more than 94% in the settling of elastin/tropoelastin in the extracellular matrix after **Idealift™** had been administrated to fibroblasts. It not only stimulates elastin synthesis but also promotes a correct and functional elastic fiber architecture by including the most important elements involved in tissue structure.

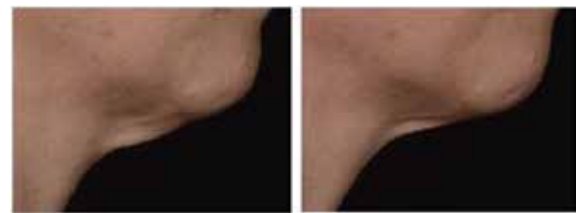

Tests were carried out on 26 female volunteers with sagging skin aged 54 to 75 years old. Women applied twice a day a cream containing 4% **Idealift™** for 2 months. Effects of this new active ingredient were proven after just one month. They were confirmed by using various evaluation techniques (Aeroflexmeter® a new device developed and patented by Sederma, FOITS and self-evaluation). The visible effects of gravity decreased and cutaneous sagging was fought and for 80% of panalists their skin was firmer.
